Apr 4, 2026	2 kg ▲	0.7 ▲	—	—	—
Apr 4, 2026	70 kg ▲	23.1 ▲	10%	119/70 mmHg	70 mg/dL
Apr 5, 2026	100 kg ▲	33 ▲	50%	120/120 mmHg	200 mg/dL

Period Summary

Weight change: -70 kg

BMI change: -21.9

Measurements: 7

Health Alerts

4 FLAGS

● **WEIGHT**
Rapid gain of +30 kg since last measurement
100 kg

● **BMI**
BMI is in the obese range
33

● **GLUCOSE**
Fasting glucose in diabetic range
200 mg/dL

● **BODY FAT**
Body fat percentage above healthy range
50%

Personalized Recommendations

6 SUGGESTIONS

NUTRITION

Consider reducing daily caloric intake by 300–500 kcal. Prioritize fiber-rich foods, lean proteins, and limit processed carbohydrates.

METABOLIC

Adopt a low-glycemic diet, increase soluble fiber (oats, legumes), and take a 15-minute walk after each meal.

BODY COMPOSITION

Combine resistance training (2–3x/week) with a moderate caloric deficit to reduce body fat while preserving muscle mass.

HYDRATION

Aim for 3.3L of water per day based on your current weight of 100 kg.

ACTIVITY

Maintain at least 150 minutes of moderate-intensity aerobic activity per week, plus 2 strength training sessions.

SLEEP

Prioritize 7–9 hours of quality sleep per night. Poor sleep directly impacts metabolism, cortisol, and recovery.
